2-webpack基础配制

webpack.config.js 代码如下

```
1    var path = require('path');
2    var fileDir = __dirname;
3
4    module.exports = {
5        entry: {
6            './bundle': path.resolve(fileDir,'./runoob1'),
7            './hello': path.resolve(fileDir,'./hello'),
8        },
9        output: {
0            path: fileDir,
1            filename: "js/[name].js"
2        },
3        module: {
4            rules: [
5                {
6                    test: /\.js$/,
7                    loader: 'babel-loader',
8                    include: ['js']
9                }
0            ]
1        }
2    };
```

webpack1 entry相当配制
